Overview

Led by Atlanta Botanical Garden, in collaboration with Botanic Gardens Conservation International and other partners from across the genus’s range, The Global Conservation Consortium for Magnolia (GCCM) has been initiated to address the conservation needs of wild Magnolia species.

The GCCM aims to mobilize a coordinated network of institutions and experts who work collaboratively to develop and implement a comprehensive conservation strategy to prevent the extinction of the world’s Magnolia species.

The programmatic objectives of the Global Conservation Consortia are to:
- Foster new and existing network(s) of experts;
- Identify species of greatest conservation concern and prioritize conservation action;
- Ensure effective in situ species conservation;
- Establish, expand and manage ex situ collections of high conservation value;
- Foster applied research (e.g. conservation biology, ecology, horticulture, population genetics, taxonomy) to support species conservation;
- Build capacity to empower and mobilize in-country partners in diversity centers and across species’ ranges;
- Increase public awareness and engagement with species conservation issues; and
- Collaboratively fundraise to scale-up conservation action.

We would like to share last year’s accomplishments here and provide our view for the year ahead. The Consortium has grown to include 53 registered Affiliates and 6 registered Species Stewards. In 2023, the GCCM hosted regional meetings for 2 regions (US/Canada and South & Southeast Asia) and GCCM members participated in workshops and conferences, including the IX World Magnolia Symposium (Honduras), CPC Annual Meeting (Phoenix, AZ), American Public Gardens Association Annual Conference (Fort Worth, TX) and the 8th Southeast Asia Botanic Gardens (SEABG) Network Conference (Philippines). This year, the GCCM has begun to develop conservation action plans for priority species and published plans for Magnolia ashei and Magnolia fraseri in 2023. Species stewards have been developing metacollections for these and other species, using gap analysis data to guide collecting and collection monitoring. This year, the GCCM has successfully received funding for at least 5 projects, including from the Institute for Museum and Library Services (IMLS), to continue to expand the GCCM and support the use of metacollection tools by gardens of all sizes. Read more about the successes of the GCCM throughout this report.

Thank you for collaborating with and supporting the Global Conservation Consortium for Magnolia. We look forward to continuing to work with you to conserve Magnolias in the year ahead.

- Jean Linsky (GCCM Coordinator) & Emily Coffey (GCCM Lead)
Networking & Communications

- The GCCM Consortium Steering Committee meets annually to discuss consortium activities. This year, CSC members have been involved in organizing and hosting virtual and in-person regional meetings, presenting on the GCCM at international conferences, and fundraising for species conservation projects.

- The GCCM work plan continues to guide the activities of the consortium. Please take a look and see how you can contribute to our goals as a global network. This work plan will be reviewed and updated for the 2024-2026 period, and the Steering Committee will be requesting input from GCCM Affiliates in early 2024.

- Information about the GCC onboarding and sign-up process is available online. A folder with resources on Roles & Responsibilities within the GCCM can be found here. The GCCM has 53 registered Affiliates and 6 registered Species Stewards signed up as of the end of 2023. Sign up as an affiliate here.

- In 2023, the GCCM hosted virtual meetings for 2 regions: update meetings for the U.S. & Canada region and the first meeting for the South & Southeast Asia region. During these meetings, project updates were shared, and discussions were held on priority actions and next steps for each region. Information, including meeting recordings, is shared on a resource page for each regional group, and additional resources are shared via Google Drive and are accessible to participants.

- The GCCM has been presented at the following national & international meetings in 2023:
  - Center for Plant Conservation 2023 Annual Meeting - Desert Botanical Garden
  - IX World Magnolia Symposium - UNACIFOR, Siguatepeque, Honduras
  - American Public Garden Association 2023 Annual Conference - Fort Worth, Texas
  - 8th Southeast Asia Botanic Garden Network Conference - Philippines
  - ‘Tools for Tree Conservation’ workshops, hosted by The Morton Arboretum and BGCI - Queen Sirikit Botanic Garden, Thailand and Vietnam National University of Forestry, Vietnam
  - 2023 Conservation Planning Specialist Group Annual Meeting - San Diego, California

- The GCCM has continued to engage in multi-consortia working groups under the Cryopreservation, Conservation Genetics & Propagation themes. All GCCM partners globally are invited to join these working groups to discuss and solve current problems in these thematic areas. Contact the GCCM Coordinator to receive invites to future meetings of these groups.

The GCCM participated in the IX World Magnolia Symposium in Siguatepeque, Honduras (May, 2023)
Communications:

- Four issues of the GCCM newsletter were circulated in 2023. These newsletters included 6 regional update stories from partners, general consortium information, funding opportunities, and events. A total of 352 individuals are currently subscribed to the newsletter and received the December 2023 issue.

- The newsletter archive is here. You can subscribe to the newsletter here. We have also created a Google Group listserv to facilitate communication amongst the global GCCM community. Contact the GCCM Coordinator if you would like to join the Google Group.

- The GCCM Twitter account (@GCCMagnolia) has been posting consortium news, events and resources. We shared 87 posts in 2023 and have 278 followers.

- In October 2023, the GCCM launched a Facebook group. This is an interactive place where all group members are welcome to share Magnolia conservation content!

The GCCM has been featured in the following newsletters/outlets in 2023:

- Magnolia The Journal of the Magnolia Society International - Volume 58 Issue 111 Spring/Summer 2023
- Smith Alumnae Quarterly - Fall 2023
- Synecology #4, 2022
Prioritization & Species Data

- The GCCM maintains a working species checklist of Magnolia (s.l.), using the 2016 Red List publication as a taxonomic basis and including more recently published species. This was last updated December 2023. This currently includes 361 species. This list includes taxonomic, conservation status and range country information. Additionally, a Data Deficient species list is managed and shared to highlight species requiring additional information for assessment.

- In 2023, a total of 16 IUCN Red List assessments were published through the work of GCCM partners. These assessments were compiled by species experts, some with the help of Atlanta Botanical Garden Conservation and Research interns.

- Ex situ survey data gathered for the Conservation Gap Analysis of Native Magnolias of the US & Canada has been used to guide collecting efforts. GCCM partners have been sharing accession data which has been used to update the ex situ metacollection maps for 3 species in the US: M. ashei, M. fraseri and M. tripetala. These maps track the increased geographic coverage of these species in ex situ collections.

- IUCN Red List Assessments published in 2023:
  - Magnolia granbarrancae
  - Magnolia chiriquiensis
  - Magnolia emarginata
  - Magnolia enepeceana
  - Magnolia frontinoensis
  - Magnolia javieri
  - Magnolia mixteca
  - Magnolia montebelloensis
  - Magnolia morii
  - Magnolia oscarrodrigoi
  - Magnolia pilocarpa
  - Magnolia quangninhensis
  - Magnolia reynelli
  - Magnolia sambuensis
  - Magnolia talpana
  - Magnolia veliziana
  - Magnolia wilsonii
  - Magnolia zotictla

Conservation & Research Activities

Highlights from the consortium:

- Species conservation action plans have been published for *Magnolia ashei* and *Magnolia fraseri*. These plans were developed with the leadership of Species Stewards, the Botanic Garden of Smith College, and US National Arboretum and will act to guide conservation action for these species in the coming years. Read more about these plans here.

- A team from the Botanic Garden and the Dept. of Biological Sciences at Smith College is conducting on-going research into the ecological condition of *Magnolia fraseri*.

- Efforts to conduct field surveys and update the assessments for DD species in Indonesia (*Magnolia banghamii*, *M. calophylloides*, *M. sumatrae*) have been supported by The Magnolia Society International and The Mohamed bin Zayed Species Conservation Fund. This work is led by researchers from the Research Center for Plant Conservation, Botanic Gardens and Forestry - BRIN and Universitas Samudra.

- The IX World Magnolia Symposium and Conservation Workshop was held from May 29th to June 3rd, 2023 in Siguatepeque, Honduras. The event was a great success for knowledge and experience exchange in the research and conservation of Magnolias as well as an opportunity to network with new and old colleagues alike. Objectives and work of the GCCM were presented through the Prioritize, Plan, Act, and Monitor framework, encouraging the use of Conservation Planning principles using good information, working towards well-defined and achievable goals, and incorporating multiple perspectives. Presentations during the symposium and discussion during the workshop highlighted great opportunities for collaboration on conservation at local, national, and international scales.
GCCM Steering Committee member Marcela Serna is leading a project ‘Conserving Magnolia virolinensis, a critically endangered tree from Santander Province, Colombia’. The focus of this project is to provide updated information about the conservation status of Magnolia virolinensis, a Critically Endangered species from Santander province, and to establish the first steps for its conservation. That means, 1) to increase public awareness in local communities, 2) to explore forests to find new trees and populations, and 3) to get fruits and seeds for propagation in nurseries near the natural populations.

Conservation genetics projects have been on-going for several species including M. fraseri, M. pyramidata, M. faustinomirandae, M. montebelloensis, M. quetzal, M. stellata, and M. zenii.

The Jardín Botánico de Medellín is dedicated to conserving Magnolia urraoensis, a globally endangered species in Colombia. Their work, currently underway, will include the production of an updated conservation status assessment, the development of a robust recovery plan, active engagement, support from the local community, advocacy for policy changes, and heightened awareness through educational workshops.

After the second year of the project 'Conservation of 3 threatened Magnolia species in the Alto de Ventanas, Colombia', Salvamontes reports 23 new adult trees (12 M. guatapensis, 5 M. polyhypsophylla and 6 M. yarumalensis) for a total of 205 adult trees of these species. From the trees that they have been propagating from seeds, they were able to translocate 70 treelets of M. guatapensis and 40 of M. polyhypsophylla into their natural habitat inside Los Magnolios nature reserve.
Funding & Resources

- A (non exhaustive) list of potential funding sources to support GCCM work is shared and specific calls for applications from various funding sources are regularly circulated using the GCCM Google Group listserv.

- The GCCM has submitted at least 16 project funding proposals in 2023 via written letters of support, proposal review and provision of species ex situ data. This includes projects in Colombia, Costa Rica, Indonesia, USA and Vietnam.

- Funding has been received for 6 proposals in 2023:

Resources:

- The GCCM webpage has expanded in 2023 to include more Resources. These include:
  - Experience in Growing Fraser and Pyramid Magnolia
  - Population study and conservation of Magnolia banghamii, a narrow endemic tree in Sumatra Island, Indonesia
  - Magnolias on the Move
  - Magnolias del Alto de Ventanas
  - American Public Gardens Association Workshop, Metacollections Management: new approaches for improving living conservation collections
  - GCC Interpretation Panels and Species Info Sheets
  - As well as updated regional meeting pages (see Networking for links).

Looking Ahead

In the coming year the GCCM will:

- increase the availability of key resource documents in multiple languages
- identify and support new Species Stewards to take action for priority threatened species
- promote the expansion of conservation metacollections through material collection and sharing
- provide training and resources on metacollection development and conservation gap analysis
- participate in international conferences and workshops to expand collaboration
